

ДЕТАЛЬНЫЙ РАЗБОР ИЗМЕНЕНИЙ В ЭССЕ.

ОРИГИНАЛ	НАШ ВАРИАНТ	ОБЪЯСНЕНИЕ
<p>Our science have changed every year. Nowadays a lot of money is spent on space exploration projects. Many people think that it is not right because this money should be used to solve problems on Earth. Let's consider both views on this issue.</p>	<p>Nowadays scientists conduct multi-billion research in space, which provokes strong opposition from those who believe that there are more immediate and more important problems on Earth which this money may help to solve. Let's consider whether or not space research should be abandoned in favour of issues on our planet.</p>	<p>Удалили первое предложение не по теме. Перефразировали: <i>a lot of money is spent on space exploration projects - scientists conduct multi-billion research in space. Many people think that it is not right - which provokes strong opposition from those who believe that.</i> Поставили проблему: вместо шаблонной фразы из оригинала сказали прямо, что проблема в том, чтобы <i>продолжать</i> или <i>прекратить</i> исследования.</p>
<p>In my opinion, space exploration is important for us because it gives us knowledge about the universe, planets, stars and asteroids. They may be dangerous, and life of all humanity may depend on this knowledge. Secondly, while studying space objects, scientists may make discoveries. For example, new chemical elements like helium can be found during such research. Such discoveries influence every person on Earth because new materials and new technologies appear as a result, and some of them are usccessfully used in medicine today.</p>	<p>In my opinion, space exploration is extremely important for us and humanity should carry on with it. First of all, it allows us to know more about the universe, planets, cosmic rays and asteroids. Distant planets should be studied as the potential home for humanity in the future, and asteroids may be dangerous for the Earth now. Consequently, life of all humanity may depend on how much we know about these. What is more, while studying space objects, scientists already make discoveries which change life on Earth right now. For example,</p>	<p>Заявили о своей позиции: исследования должны продолжаться. Далее стали использовать союзные слова для логической связи, а не просто для очередности. Использовали более интересную лексику и грамматику (allows to know vs. gives knowledge). Добавили обоснование аргументу о важности и актуальности знания о космосе — <i>дом в будущем, зависимость жизни на земле от</i></p>

Also, some information about the influence of the space and the stars on humans' health can be obtained as a result of space studies, like the pole of cosmic rays in gene mutations and the evolution itself.

new chemical elements like helium can be found during such research. Also, information about the influence of the space and the stars on humans' health can be obtained as a result of space studies, like the role of cosmic rays in gene mutations and the evolution itself.

знаний о космосе. До этого утверждение было голословным.

Использовали союзы логической связи (Consequently, What's more), добавили деепричастный оборот (while studying — изучая), и относительное придаточное предложение (which change life on Earth right now).

Пример про гелий, возможно, уберем — он не потребуется для дальнейшего рассуждения, но посмотрим потом.

On the other hand, some people who think that space exploration is a waste of time and money claim that this money should be used to help particular people on Earth now, for example those with dangerous illnesses. Secondly, they believe that governments had better spend this money on education. Equipment for thousands of schools, especially in poor countries may be bought with this money.

On the other hand, space exploration is often claimed a waste of time and money. Those who think so believe that this money should be spent on finding cure for dangerous diseases and saving people on earth right now. They also encourage governments to invest more in education saying that thousands of schools, especially in poor countries, may be equipped with this money.

Использовали интересную грамматику. Вместо подлежащего и сказуемого в действительном залоге «people think» - Сложное Подлежащее, Complex Object. “exploration is claimed”.

Перефразирование/синоним — вместо «help particular people on Earth now, for example those with dangerous illnesses» используем «find cure for diseases”. Еще синоним с более интересным словом: вместо «spend money on

		<p>education” - “to invest more in education”.</p> <p>Перефразирование с интересной грамматикой: «buy equipment» превратилось в «to equip» в пассиве. Это два очка — и за лексику и за грамматику.</p>
	<p>However, they forget that new materials and technologies obtained in space experiments are already being used in modern medicine, in particular – in artificial organs, or arms and legs. Moreover, the issue of inequality in living conditions between countries had been around long before the first man in space, so it is unreasonable to try to solve this issue at the expense of science.</p> <p>All in all, I believe that current and possible benefits that space exploration can give us are so great and important that it definitely should continue.</p>	<p>То, чего не было в оригинале — контраргументы.</p> <p>Первое - возражение на аргумент, что польза от денег нужна здесь и сейчас, а не где-то там. Мы говорим, что на самом деле польза от космоса есть уже сейчас и приводим пример.</p> <p>Второй аргумент мы отвергаем как не имеющий непосредственного отношения к космосу.</p> <p>В заключении используем тот «общий знаменатель», который нашли раньше: «здесь и сейчас» против «там и потом» и «очевидная польза» против «возможная польза».</p>
